

The Path to Meaningful Use

With the publication of the Final Rules for certification of electronic health records and their meaningful use, the months of anticipation have ended. Meeting the 2011 requirements for meaningful use, however, will only bring the minimum of improvements and ROI.

As you continue the ascent to world-class healthcare, be certain that you have the best tools, guides and plans available. Allscripts is ready to provide you with all three — and help accelerate your success.

MAKING THE CLIMB

BASECAMP

Report & Claim Stimulus

You've earned your incentive. Just report your success and claim your check. Now you can continue the ascent to world-class healthcare.

START CLIMBING

Begin 90-day Meaningful Use

Stage 1 only requires 90 consecutive days of use. We recommend at least 60 days of use before starting those 90 days to minimize the chance of unforeseen challenges.

READY THE TEAM

Rollout

Once you have the wrinkles smoothed out, it's time to begin deployment across the practice. Be sure to have designed, tested and delivered the right training to all your staff.

TRADING POST

Upgrade EHR & Stimulus Set

When you're ready, upgrade to the Stimulus-ready version of your Allscripts EHR and add the Stimulus Set. Or, if you want to receive even more value sooner, acquire the Allscripts Patient Portal and Clinical Quality Solution!

GUIDE STATION

Design New Workflows

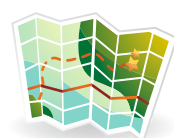

Plan for the future and redesign your clinical and operational workflows. Don't just conform to the minimum requirements — use your gap assessment to design the system that's best for you and your patients.

LOOKOUT SPOT

Assess Gaps

Once you have the Final Rules well in hand and your objectives understood, a concentrated gap analysis will lead to efficient planning and resource allocation.

CLIMBERS CHECK-IN

Understand Stimulus

The first step is to understand the Final Rules, and what they mean for your practice. You'll need to decide what benefits you want from your system, and how you want to exceed the minimum requirements.

START

Contour Interval: 50 Feet

7 Steps to Meaningful Use

- Understand Stimulus
- Assess Gaps
- Design New Workflows
- Upgrade EHR & Stimulus Set
- Rollout
- Begin 90-Day Meaningful Use
- Report & Claim Stimulus
